

# Web recorder

The plugin is initialized using the init object in **window.yeay**

The application creates an event **yeay-init** with which you can initialize the plugin and prepare it for work by passing the necessary parameters.

## Quick Start

```
<script src="https://creator.yeay.com/static/js/yeay.js"></script>
<script>
  document.addEventListener("yeay-init", function () {
    window.yeay.init({
      organizationPublicId: 'TEST_60502f360b62caccafa06037',
      facilitatorId: "some facilitator",
      publisher="yeay",
      selector: 'yeay-plugin-selector',
      background: "https://www.abc.net.au/cm/rimage/7701966-3x4-large.jpg?v=2",
      logo: "https://cdn.auth0.com/blog/react-js/react.png",
      color: "black",
      backgroundColor: "red",
      remoteProduct: {
        name: 'Apple iPhone',
        brand: 'Apple',
        publicId: '6698870276282',
        url: "https://www.abc.net.au/cm/rimage/7701966-3x4-large.jpg?v=2",
        imageUrl: "https://www.abc.net.au/cm/rimage/7701966-3x4-large.jpg?v=2"
      },
      isDev: false,
    });
  });
</script>
<div id="yeay-plugin-selector"></div>
```

## Initial parameters

- **Application parameters**
  - organizationPublicId
  - facilitatorId
  - publisher
  - selector
  - isDev
- **Styled parameters**
  - backgroundColor
  - color
  - background
  - logo
- **Product parameters**
  - remoteProduct
  - name
  - brand
  - publicId
  - url
  - imageUrl

## Application parameters

### organizationPublicId

Type: string

Specifies the organizationPublicId for which product videos will be retrieved. Can be viewed in *Campaign Manager*.

**A required parameter.**

### publisher

Type: string

Determines the publisher to which the recorded video will be uploaded. The default publisher is 'yeay' if other was not specified.

*Default value:* 'yeay'
